

NIKHARA (NIKI) INDERLAL

Analytics Consultant | Analytics Engineer | Client-Facing BI & Data Delivery

Sydney, Australia | nikhara.inderlal@proton.me | +61 474 851 616 | nikhara-inderlal.github.io

3+ YEARS ANALYTICS / BUSINESS STATISTICS | 1 YEAR HEALTHCARE ANALYTICS | MICROSOFT FABRIC · POWER BI · SQL · TABLEAU · ALTERYX

PROFESSIONAL SUMMARY

Analytics Consultant and Analytics Engineer with 3+ years' experience across enterprise analytics, business statistics and quantitative decision support, including **1 year delivering healthcare analytics**. Operates autonomously across the full consulting lifecycle - independently leading SME requirements gathering, translating business needs into analytical solutions, developing and validating reporting, producing technical and business documentation, leading stakeholder walkthroughs, securing sign-off and deploying solutions through TEST to PROD. Combines strong technical capability in Microsoft Fabric, Power BI, SQL, Tableau and data modelling with initiative, business understanding and clear stakeholder communication.

PROFESSIONAL EXPERIENCE

MIP (Aust) Pty Ltd Mar 2025 - Present

Associate Consultant (Data Analytics) / Analytics Engineer (BI & Data)

Autonomously owns client delivery from SME discovery through production release. Embedded across enterprise client teams spanning healthcare, engineering, telematics, manufacturing, QSR/franchise, education and not-for-profit environments; independently leads requirements gathering, solution design, validation, documentation, walkthroughs, stakeholder approval and production handover.

ABANO HEALTHCARE | Australasia's largest dental support organisation | 220+ practices across AU & NZ | Sep 2025 - Present

Analytics Engineer / Power BI Developer | Fabric · Direct Lake · Power BI · DAX · T-SQL · Power Apps · Power Automate

- **Delivered and enhanced an enterprise healthcare analytics portfolio.** Worked across Finance, Marketing, Clinical Assurance and P&C using Microsoft Dynamics 365, PayGlobal and multiple practice-management-system data structures.
- **Worked deeply across a governed enterprise semantic model.** Worked across a 70-table Gold-layer Direct Lake model built to strict star-schema standards; independently built 10 Gold tables, several end-to-end from Bronze to Gold, improved upstream Bronze/Silver transformations, created dimensional relationships and authored 400+ report-specific measures.
- **Reduced analyst dependency and made clinical exceptions faster to identify.** Built two self-service Clinical Assurance dashboards spanning 12+ pages with dynamic thresholds, automated exception flagging, targeted filtering and contextual interpretations so users can focus on cases requiring review without repeated report changes.
- **Accelerated exception categorisation and investigation.** Enhanced the embedded Power App with bulk categorisation and commenting, reducing repetitive update actions by up to ~95% when cases share an outcome, with investigation results feeding back into governed enterprise reporting.
- **Introduced a more meaningful and flexible CLTV capability for Marketing.** Developed dynamic churn, retention, cohort and lifetime-value analytics, enabling Marketing to test alternative churn assumptions and immediately understand their impact on retention and customer value.
- **Reduced Finance's reliance on manual lookups.** Built two governed Excel reports connected to the Fabric SQL analytics endpoint, consolidating financial dimensions and measures into daily-refreshed outputs while preserving flexibility for independent calculations and PivotTable analysis.
- **Strengthened enterprise location-data governance across AU & NZ.** Created and validated a governed practice-region-country mapping that was adopted as the Region Master and used to derive consistent State and Country attributes for patient and downstream reporting.
- **Owned stakeholder delivery from requirements through PROD.** Independently led SME requirements sessions and walkthroughs for Finance, Marketing and Clinical Assurance, produced supporting documentation, secured approval/sign-off and deployed validated solutions through TEST to PROD.

TELETRAC NAVMAN | Fleet Telematics | 170+ vehicle fleet

Analytics Consultant / Data Engineer / Tableau Developer | Alteryx · Tableau · APIs

- **Turned raw telematics data into measurable fleet-efficiency and cost-loss insight across 170+ vehicles.** Integrated TN360 vehicle/event/user API data with enriched vehicle attributes, fuel-consumption benchmarks and Australian fuel-pricing data to calculate trip-level fuel usage/cost and actual-versus-optimised performance.
- **Demonstrated initiative beyond the assigned data-engineering scope.** Independently proposed and built the Tableau efficiency solution with vehicle/driver classifications, idling-loss analysis and fuel/money saved-or-wasted views; selected as a joint winner of the internal dashboard challenge and received positive final client feedback.

OAKBERRY | Global QSR / Franchise | 40+ locations

Analytics Consultant / Tableau Developer | Tableau Prep · Tableau · Excel VBA · Hyper

- **Made monthly franchise reporting scalable across 40+ locations.** Used Tableau Prep to consolidate 38 store Excel files, solved a stacked product/topping structure with VBA-generated row IDs and implemented wildcard unioning for repeatable future ingestion.
- **Introduced the client's first visibility into basket and product-affinity behaviour.** Built five Spanish-language Tableau dashboards for the Mexican operation covering MoM/YoY KPIs, topping combinations, product/revenue performance, delivery vs in-store behaviour and day-by-hour demand.

SCOUTS | National Youth Organisation

Project Lead / Analytics Consultant | Power BI · Amazon Redshift · Monday.com

- **Led a six-person analytics team through end-to-end delivery of five Power BI dashboards.** Coordinated requirements, blockers, work allocation and design reviews; introduced Monday.com tracking and structured Agile delivery while contributing Redshift/Power Query modelling and maintaining documentation and UX consistency through stakeholder sign-off.
- **Built the delivery controls as well as the dashboards.** Created a requirements/checklist framework, tracked blockers and dependencies, maintained transformation/calculation documentation in Excel with controlled inputs, and guided design consistency across dashboards built by different analysts.

MAURI | Food Manufacturing / FMCG

Reporting Analyst / Tableau Developer | Tableau · Alteryx

- **Enabled site managers to identify cost variance from high-level performance down to detailed expense drivers.** Designed MTD/YTD Actual-vs-Forecast analysis across 12 reporting periods with Site-to-EBIT-to-cost-category drill-down, dynamic above/below-forecast colouring and 3+9 forecast-version logic.
- **Extended expense reporting into operational efficiency.** Introduced MTD and running-total Actual-vs-Forecast \$/tonne trends for manufacturing and distribution; documented measures and delivered a recorded walkthrough so users could understand and maintain the solution independently.
- **Compressed multiple levels of management analysis into highly interactive Tableau views.** Used drill-down, hover tooltips, filters and bullet-chart forecast markers so site managers could move from enterprise/site performance to EBIT, cost category and individual expense detail without separate reports.

UGL | Engineering & Infrastructure Services

Analytics Consultant / Power BI Developer | Power BI · Power Query · DAX

- **Enabled executives to prioritise tender opportunities using evidence-based commercial analysis.** Built historical win rates, contract-value classifications and comparable-client/industry benchmarking for opportunities without direct history, supported by DAX KPIs and hierarchical pipeline reporting.
- **Prepared and modelled the opportunity data for executive use.** Used Power Query cleaning, duplication, grouping and merging to create an aggregated analytical dataset, with hierarchical matrices, business-unit/region/stage filtering and dynamic refresh information for repeatable executive reporting.

FINTONA GIRLS' SCHOOL | Independent Education | 20+ years of data

Analytics Consultant / Power BI Developer | Power BI · DAX · Mathematical Modelling

- **Created a fairer way to measure student improvement across increasing year-level difficulty.** Applied a linear weighting model across 20+ years of assessment data, normalising current performance against each student's history and recognising both genuine improvement and sustained high performance.
- **Built a personalised student-progress reporting experience.** Restructured multi-year, multi-subject records into a student-subject-term model and delivered subject matrices plus year/semester trends for marks, historical averages, weighted change and effort - focusing comparison on each student's own trajectory rather than peers.

MIP INTERNAL | Digital & Marketing Analytics

Analytics Engineer | GA4 · BigQuery · Alteryx Server · SQL Server

- **Created a reusable digital analytics foundation for recurring marketing reporting.** Built scheduled daily GA4-to-BigQuery loads, parameter unnesting and multi-site consolidation, then created governed downstream fact/dimension structures with audit, freshness and key-integrity controls for Power BI.
- **Created a reusable digital analytics foundation rather than one-off extracts.** Designed schema and access patterns for recurring site data, including service-account connectivity and Alteryx/ODBC downstream use, so the prepared data could support repeatable marketing reporting and MoM/YoY analysis.

MACQUARIE UNIVERSITY

Lead Sessional & Teaching Associate - Business Statistics and Insights; Calculus and Linear Algebra | Feb 2023 - Mar 2025

- **Delivered university-level statistics and mathematics teaching for classes of 30+ students.** Applied descriptive statistics, hypothesis testing, confidence intervals, correlation and regression using real datasets and Excel; assessed analytical methodology, interpretation and communication.
- **Built nearly two years of additional quantitative and stakeholder-facing experience before consulting.** Explained statistical assumptions and outputs to non-specialists, guided interpretation of p-values, confidence intervals and regression results, and provided structured feedback on analytical conclusions and visual communication.

Research Assistant - Statistics | Nov 2024 - Mar 2025

- **Supported statistical research and data collection.** Completed literature synthesis/ethics documentation and built a Qualtrics survey for downstream analysis.
- **Applied research governance and analytical planning.** Supported literature review, ethics preparation and survey design while considering how collected responses would be structured for subsequent statistical analysis.

EDUCATION & CERTIFICATIONS

BSc Mathematics (Major), Statistical Modelling (Minor) - Macquarie University | WAM 83.6 (GPA 6.3) | Highest Achievement: MATH3599 PACE

Certifications: Microsoft DP-700 | DP-600 | PL-300 | Tableau Certified Data Analyst | Alteryx Designer Advanced | HackerRank SQL Advanced | Python Basic
