

Nikhara Inderlal

Data Analytics Engineer | BI Consultant

Sydney, Australia | nikhara.inderlal@proton.me | +61 474 851 616

PROFILE

Nikhara is a Microsoft-certified Fabric Data Engineer and Analytics Engineer and an Associate Consultant delivering analytics engineering, reporting and visualisation across 9+ engagements. She works with stakeholders to clarify requirements and metric logic, then builds the underlying data and reporting layers; SQL dimensional models, governed semantic models and reusable measures, and automated pipelines in Microsoft Fabric and BigQuery (including GA4 exports, curated schemas and scheduled queries). She produces dashboards and reporting packs that translate operational and finance data into clear KPIs, trends and variances, with reliability ensured through structured testing, reconciliation/tie-outs and audit logging. Her BSc in Mathematics (Major) and Statistical Modelling (Minor) underpins strong analytical rigour in metric design and validation, and she supports delivery end-to-end through UAT, walkthroughs, handover and BAU support. She has also worked with Dynamics 365 (D365) Finance data to support financial reporting.

CERTIFICATIONS

- Microsoft Certified: Fabric Data Engineer Associate (DP-700)
- Microsoft Certified: Fabric Analytics Engineer Associate (DP-600)
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- Tableau Certified Data Analyst
- Alteryx Designer Advanced Certification
- HackerRank SQL (Advanced)
- Microsoft Power BI Data Analyst Professional Certificate (Coursera)
- HackerRank Python (Basic)

CORE CAPABILITIES

- Analytics engineering: ETL/ELT pipelines, orchestration and scheduling, raw-to-curated layering, refresh automation
- Data modelling: star schemas, fact/dimension design, semantic layer governance, reusable measures and definitions
- SQL engineering: complex transformations (CTEs, window functions), DDL and schema design, performance-minded querying
- Data quality and reliability: unit tests, reconciliation/tie-outs, audit logging, anomaly investigation and root-cause analysis
- Reporting and decision support: KPI frameworks, trend and variance analysis (MTD/YTD, MoM/YoY), executive reporting packs
- Stakeholder delivery: requirements and metric logic, walkthroughs, documentation and handover; UAT support and release coordination
- Integrations: GA4 to BigQuery, ODBC connectivity, SharePoint ingestion; service accounts and controlled access
- Security & access: Row-level security (RLS) in Power BI for multi-user environments; role-based access

TOOLS

- Microsoft Fabric: Lakehouse, Warehouse (Synapse-based SQL), notebooks (T-SQL, Spark SQL), semantic models, Data Factory pipelines
- Power BI: data modelling, DAX measures, RLS, publishing and refresh; report enhancement and governance
- GCP/BigQuery: GA4 export, scheduled queries, DDL schema design, parameter unnesting, multi-site consolidation

- SQL platforms: SQL Server, PostgreSQL, MySQL; DBeaver and SSMS; Power Query (M)
- Alteryx (incl. Server): API integrations, ODBC connectivity, ELT automation, scheduling, data preparation
- Tableau and Tableau Prep: dashboards, LODs/parameters, published data sources and prep flows
- Excel: Power Query, modelling, live connections, macros
- R and Python: working knowledge
- Delivery tooling: Azure DevOps, Confluence (Agile/Scrum delivery), controlled releases

PROFESSIONAL EXPERIENCE

MIP (Aust) Pty Ltd (formerly The Data School) | Associate Consultant (Data Analytics)/ Analytics Engineer (BI and Data)

Sydney, Australia | Mar 2025 - Present

Role summary: Nikhara works as a consultant across client and internal engagements (9+ analytics and data engineering engagements), delivering analytics engineering and reporting solutions end-to-end – from requirements and metric logic through data modelling, validation, stakeholder walkthroughs and BAU support.

- Runs requirements sessions with finance and operational stakeholders, agreeing KPI definitions, success criteria and reporting outputs.
- Delivers multiple dashboards and reporting packs across engagements (Power BI and Tableau), including BAU enhancements and new builds.
- Builds reporting-ready datasets and governed semantic models (Microsoft Fabric and Power BI), including dimensional modelling and reusable measures; delivers dashboards across Power BI and Tableau.
- Develops automated refresh and orchestration (Fabric Data Factory, BigQuery scheduled queries and Alteryx Server) and applies data quality controls including unit tests, tie-outs and audit logging.
- Supports delivery in Agile teams using Azure DevOps and Confluence, including UAT and controlled releases; has worked with Dynamics 365 (D365) Finance data to support financial reporting.
- Managed reporting: iterating and supporting existing dashboards in BAU; handling stakeholder queries, enhancements and refresh reliability
- Client enablement: UAT sessions, report walkthroughs and training; handover documentation

Selected engagements:

Healthcare client (Finance and Assurance) | Analytics Engineer / Power BI Developer (Microsoft Fabric)

Sep 2025 - Present | Tools: Fabric (Lakehouse/Warehouse, Direct Lake), Power BI, T-SQL, Spark, Azure DevOps, Confluence

- Contributed to rebuilding and standardising Finance & Assurance reporting using a shared semantic model (Direct Lake) and curated fact/dimension structures to improve consistency and scalability.
- Created and enriched reporting tables using T-SQL and Spark notebooks; implemented reusable base measures and validated outputs across source extracts, curated datasets and final report outputs (including reconciliation/tie-outs and audit checks).
- Delivered a suite of Finance & Assurance reporting outputs (Power BI and Excel), covering KPI and variance reporting, point-in-time snapshots and exception monitoring; supported UAT and controlled DEV-TEST deployments with tracking and stakeholder updates.
- Built a Headcount and Turnover report by ingesting historical workforce snapshot data into Fabric, implementing snapshot logic in the Fabric Warehouse, and extending the dimensional model to support point-in-time reporting.
- Developed an exception report to identify missing reference mappings impacting downstream transaction reporting (e.g., unmapped payment attributes or missing staff identifiers), improving completeness and reducing remediation time.

MIP Internal (Sales and Marketing) | Analytics Engineer (GA4, BigQuery, Alteryx, SQL Server)

Aug 2025 - Sep 2025 (enhanced in subsequent phase) | Tools: BigQuery, GA4, Alteryx Server, SQL Server, Power BI

- Implemented GA4 export to BigQuery with scheduled daily loads, combined schema design (DDL), and parameter unnesting for analysis-ready tables across multiple websites.

- Configured service accounts; connected Alteryx via JSON key and ODBC to extract curated data and transform into fact/dimension structures for downstream reporting.
- Implemented SQL Server audit logging to validate data freshness and key integrity each run; enhanced reporting with MoM/YoY variance views across key segments.

Additional engagements:

- Engineering Services: executive tender/opportunity reporting with historical win-rate analysis and benchmarking-based estimation logic.
- Private School: baseline-normalised performance metric and longitudinal trend reporting to support fairer interpretation over time.
- Food & Beverage Franchise: automated monthly sales reporting and MoM/YoY comparisons across store locations.
- Telematics: trip-level fuel usage and cost analytics compared to benchmark expectations to identify potential wastage.
- Online Retail: SQL validation rules, triggers and audit logging to improve data integrity and traceability.
- Food Manufacturing (forecasting/variance)
- Youth Organisation (multi-level stakeholder reporting)

Further engagement details can be provided on request (client confidentiality observed).

Macquarie University | Lead Sessional & Teaching Associate (Business Statistics & Insights; Calculus & Linear Algebra)

Sydney, Australia | Feb 2023 - Mar 2025

- Delivered workshops in Business Statistics & Insights, teaching applied methods (hypothesis testing, correlation and linear regression) using Excel and real datasets; helped students interpret results and communicate findings clearly.
- Designed and facilitated practical exercises that built data literacy (cleaning, summarising and visualising data), and provided structured support to students via forums/email to clarify concepts and assessment requirements.
- Marked and moderated assessments, ensuring consistency of statistical reasoning, calculations and conclusions across the cohort; coordinated with academic staff and teaching teams to support smooth delivery.

Macquarie University | Research Assistant (Statistics)

Sydney, Australia | Nov 2024 – Mar 2025

- Supported a statistics academic with research tasks including literature synthesis and preparation of documentation for an ethics application.
- Built a Qualtrics survey to support data collection and assisted with planning the structure of collected data for downstream analysis.

Optimized Routing Solutions | Telecommunications Network Analyst (Part-time)

Sydney, Australia | Mar 2016 - Jun 2021

- Monitored international switching infrastructure; analysed capacity and performance trends; produced monthly quantitative reporting with validation checks.

EDUCATION

Macquarie University | Bachelor of Science - Mathematics (Major), Statistical Modelling (Minor)

Sydney, Australia | Feb 2021 - Dec 2022 (degree conferred Feb 2023)

- WAM 83.6 (GPA 6.3); Certificate of Highest Achievement: MATH3599 PACE - Professional Practice for Mathematical Sciences
- Relevant statistics coursework: STAT1170 (Introductory Statistics), STAT2170 (Applied Statistics), STAT2173 (Probability), STAT3175 (Linear Models)
